

About Cavea

Cavea GmbH, headquartered in Goslar, is part of the Bornemann Group and draws on over 35 years of experience in the field of location technologies.

Since its reorientation in early 2025, the company has focused on the development and distribution of powerful real-time locating system (RTLS) solutions that are specifically designed to meet the complex requirements of manufacturing, logistics, healthcare, and defense. The company's goal is to make location tracking more efficient and scalable through modular and future-proof technology "Made in Europe."

At the heart of the system are the Tribrid[®] tracking tags, which combine various location technologies—including Angle of Arrival (AoA) or Ultra-Wideband (UWB) in combination with Cavea Wirepas Mesh, Bluetooth Low Energy (BLE) and RFID – in a single device. This technological integration enables flexible implementation of a wide variety of use cases, even in complex operating environments.

Headquarters of Cavea GmbH in Goslar

Tribrid[®] tags can be used in a wide range of applications, such as optimizing logistics processes, monitoring medical equipment, or tracking equipment in real time in safety-critical infrastructures. Thanks to the wireless mesh infrastructure, implementation is easy, even in existing buildings.

As an active partner of omlox, Cavea GmbH also supports the industrial standard for position data and enables the parallel operation of various location solutions for customers via an omlox hub, as well as the connection of software solutions to it via standardized interfaces. This allows Cavea's customers to remain flexible and benefit from the maximum added value of the position data generated.
